

Carbon Reduction Plan – Planon Ltd.

Supplier name: Planon Ltd.

Commitment to achieving Net Zero

Planon Ltd. aims to achieve a Net Zero emissions by 2050

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2019	
Additional Details relating to the Baseline Emissions calculations.	
<p>Scope 1: Direct GHG emissions Our Scope 1 processes primarily involve office related emissions like fuel combustion and fugitive emissions from air-conditioning equipment:</p> <ul style="list-style-type: none"> Fuel Combustion – Gas Fugitive Emissions from Air-conditioning Equipment: HFCs (Hydrofluorocarbons) 	
<p>Scope 2: Electricity indirect GHG emissions Our Scope 2 processes primarily involve stationary combustion related to the consumption of purchased electricity in our offices:</p> <ul style="list-style-type: none"> Consumption of Purchased Electricity 	
<p>Scope 3: Other indirect GHG emissions Planon recognizes that its environmental impact extends beyond its direct operations and has identified its Scope 3 emissions. We have chosen to keep track of the following Scope 3 emissions as they are significant relative to our Scope 1 and Scope 2 emissions and offer potential opportunities for emissions reductions:</p> <ul style="list-style-type: none"> Employee Business Travel: Rail, Air, cars (lease) Employee Commuting Waste 	
Baseline Year: 2019	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	44
Scope 2	394
Scope 3 (Included Sources)	631
Total Emissions	1086

Current Emissions Reporting

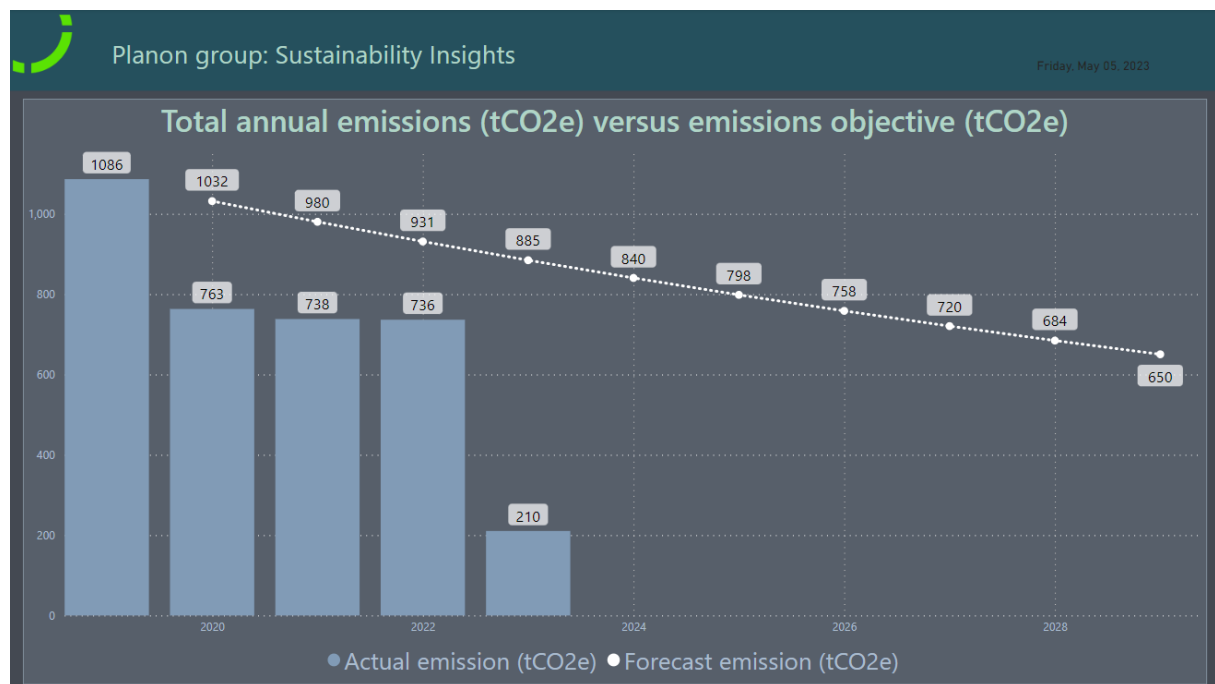

Reporting Year: 2022	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	0
Scope 2	337
Scope 3 (Included Sources)	398
Total Emissions	736

Emissions reduction targets

In order to continue our progress to aiming for Net Zero, we have adopted the following carbon reduction targets.

We aim to reduce our GHG emissions by 5% annually, consistent with our commitment to ISO 14001. Our reduction targets will align with our business objectives and take into account the latest science and best practices. We will regularly review our targets and adjust them if necessary to ensure they remain ambitious and achievable.

We project that carbon emissions will decrease over the next five years to 720 tCO₂e by 2027. This is a reduction of 2%. Progress against these targets can be seen in the graph below:

Graph 1. Actual and objective emissions Planon

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2019 baseline.

- Started ISO14001 certification
- Installed 659 m² solar panels
- Renewed old energy (gas) and fugitive consuming HVAC systems
- Implemented LED lighting in combination with occupancy and daylight sensors
- Implemented time slots for fixtures
- Implemented re-usable and recyclable coffee cups
- Promoted usage of public transport
- Promoted usage of EV's
- Promoted usage of bicycle plan
- Reduced food waste
- Implemented the usage of natural pesticides for pesticide management.

The carbon emission reduction achieved by these schemes equate to 350 tCO₂e, a 32.23% reduction against the 2019 baseline and the measures will be in effect when performing the contract. Please find details on the completed carbon reduction project "[Started ISO14001 certification](#)" on the Planon website.

In the future we hope to implement further measures such as:

- Further promotion of usage of EV's
- Further reduce waste
- Purchase sustainable green energy

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard 13 and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
