

Carbon Reduction Plan – Planon Beheer B.V.

Supplier name: Planon Beheer B.V.

Commitment to achieving Net Zero

Planon Beheer B.V. aims to achieve Net-Zero emissions by 2030

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that were produced in the past, prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which reduction of emissions can be measured.

The data has important limitations as it does not cover all Planon activities. By the end of 2024, all Planon scope 1 and scope 2 activities, and the most significant activities in scope 3 will be fully covered. Historical emissions data will be recalculated along with targets. Coverage of Planon HQ (about 450 employees) is 100% based on the identified material emission sources. Below is a breakdown of total coverage by scope:

- Scope 1, 4 of the 25 Planon offices are covered.
- Scope 2, 7 of the 25 Planon offices are covered.
- Scope 3, business travel by train and plane is 100% covered for all operations.
- Scope 3, employee commuting, business travel by car and waste are covered at Planon HQ.

| | |
|---|----------------------------|
| Baseline Year: 2019 | |
| Additional Details relating to the Baseline Emissions calculations | |
| Scope 1: Direct GHG emissions | |
| Our Scope 1 processes primarily involve office related emissions like fuel combustion and fugitive emissions from air-conditioning equipment: | |
| <ul style="list-style-type: none"> • Fuel Combustion – Gas • Fugitive Emissions from Air-conditioning Equipment: HFCs (Hydrofluorocarbons) | |
| Scope 2: Electricity indirect GHG emissions | |
| Our Scope 2 processes involve stationary combustion related to purchased electricity in our offices: | |
| <ul style="list-style-type: none"> • Consumption of Purchased Electricity | |
| Scope 3: Other indirect GHG emissions | |
| Planon recognizes that its environmental impact extends beyond its direct operations and has identified its Scope 3 emissions partly. We have chosen to keep track of the following Scope 3 emissions as they are significantly relative to our Scope 1 and Scope 2 emissions and offer potential opportunities for emissions reductions: | |
| <ul style="list-style-type: none"> • Employee Business Travel: rail, air, cars (lease) • Employee Commuting • Waste | |
| Baseline Year: 2019 | |
| EMISSIONS | TOTAL (tCO ₂ e) |
| Scope 1 | 44 |
| Scope 2 | 571 |
| Scope 3 (Included Sources) | 632 |
| Total Emissions | 1247 |

Current Emissions Reporting

| | |
|----------------------------|---|
| Reporting Year: 2023 | |
| EMISSIONS | TOTAL (tCO ₂ e) Market-based |
| Scope 1 | 0 |
| Scope 2 | 368 |
| Scope 3 (Included Sources) | 318 |
| Total Emissions | 686 |

Emissions reduction targets

In order to continue our progress towards Net Zero, we have adopted the following carbon reduction targets.

We aim to reduce our GHG emissions by at least 10% annually, consistent with our commitment to ISO 14001. Our reduction targets will be aligned with our business objectives and take the latest science and best practices into account. We will regularly review our targets and adjust them if necessary to ensure they remain ambitious and achievable.

We project that carbon emissions will decrease to 339 tCO₂e by 2027. This is a reduction of -73% against the base year. Progress against these targets can be seen in the graph below:

Graph 1. Actual and objective emissions Planon

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2019 baseline:

- Achieved ISO 14001 certification
- Installed 385 solar panels covering 659 m²
- Replaced fossil fuel-based (natural gas) HVAC systems to heat pumps in Planon-owned buildings
- Implemented LED lighting in combination with occupancy and daylight sensors in Planon-owned buildings
- Implemented time locks for fixtures
- Implemented re-usable and recyclable coffee cups
- Promoted usage of public transport
- Promoted usage of EVs
- Promoted usage of bicycle plan
- Reduced food waste
- Implemented the usage of natural pesticides for pest management
- Implemented waste reduction strategies
- Purchase of renewable energy.

The carbon emission reduction achieved by these schemes equate to 460 tCO₂e, a 57.88% reduction against the 2019 baseline.

In the future we hope to implement further measures to achieve:

- Full monitoring of all Planon operations
- A global fleet consisting of 100% electric vehicles
- Further waste reduction
- Improved energy efficiency in our offices
- A switch to 100% renewable energy.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard 13 and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

Pierre Guelen (May 1, 2024 14:11 GMT+2)
